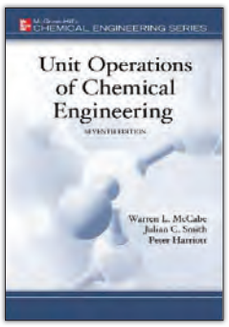
INTRODUCTION TO MANUFACTURING TECHNOLOGIES

TEXTBOOK
ISBN : 978-81-7992-997-1
Price RM : 126.00
2014

DESCRIPTION: Manufacturing technology provides the tools that enable production of all manufactured goods. These master tools of industry magnify the effort of individual workers and give an industrial nation the power to turn raw materials into the affordable, quality goods essential to humanity. Introduction to Manufacturing Technologies offers comprehensive treatment of conventional, as well as recent advances of technologies in the field of Casting, Forming, Welding, Powder Metallurgy and Plastics. Intended primarily as a text for the undergraduate and graduate students of diverse engineering disciplines like Mechanical Engineering, Production Engineering and Metallurgy, the book should also prove useful for professionals in this field.



UNIT OPERATIONS IN ENVIRONMENTAL ENGINEERING

ISBN : 978-81-7992-898-1
Price RM167.00
2014

DESCRIPTION: Each chapter deals with unit operations such as biological, chemical, physical, radiation and electrical technology besides others. Traditional technologies have been included, as well as those that can be considered innovative, and emerging. In addition, a number of technologies have been developed by combining processes directly, or in a treatment train, and these developments are expected to assume increasing importance. However, such concerns as uncertainties due to liability, regulatory approval, price competition, and client approval have limited the application of some of these newer technologies. The purpose of this book is not to describe commercial processes, but a number of proprietary processes are included in order to present additional information.

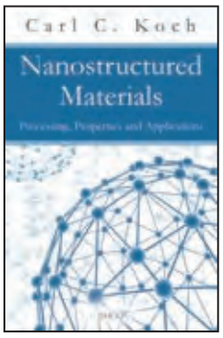
DESCRIPTION : This new edition has been designed to cover the syllabi of all major universities in India. The concepts and design aspects have been explained with a large number of real world applications and solved problems. Basic thermodynamic concepts have been thoroughly revised and have been included along with detailed discussion of all cycles, design of IC engines, simulation of IC engines and noise and emission control in IC engines. Special emphasis has been given on inclusion of solved numerical problems and hints to important points. The text also offers detailed discussion on advanced IC engine combustion concepts like HCCI, alternative fuels and conventional fuels.



NANOSTRUCTURED MATERIALS

ISBN : 81-7992-615-X (H.B.)
Price RM : 557.00
ISBN : 978-81-8495-040-3 (P.B.)
Price RM : 167.00

DESCRIPTION : Nanostructured materials include atomic clusters, layered (lamellar) films, filamentary structures, and bulk nanostructured materials. The common thread to these materials is the nanoscale dimensionality, i.e. at least one dimension less than 100 nm, more typically less than 50 nm. The different, often superior, properties that can occur is the driving force behind the explosion in research interest in these materials. With the recent intense interest in this broad field, a number of books, articles and conferences have been published.

ALTERNATIVE FUELS

ISBN : 978-81-8495-078-6
Price RM : 139.00

DESCRIPTION : Traditional fuels such as petrol, diesel, and kerosene emit harmful gases, such as carbon dioxide, carbon monoxide, and sulphur dioxide. These gases contribute to global warming. As a result of heightened Global Climate Change due to Global Warming affecting the Earth, we have engaged ourselves in the search for alternative sources of energy that are non-poisonous and safe for future generations as well. It's in this context that alternative fuels emerge and hold great importance.
